

ALDERBROOK

ENVIRONMENTAL STEWARDSHIP

Alderbrook Resort & Spa is committed to maintaining a leadership position in the Northwest for environmental management of the property's waste stream by continually researching new options, products, and methods that enhance this objective.

'Green SEAL' housekeeping chemicals – Alderbrook Resort & Spa utilizes an ever-growing selection of environmentally friendly products. The hotel searches out many products that are made with less energy and materials but deliver the same service and are sold in bulk to reduce the amount of packing. These products are made with recycled materials, use renewable resources and not fossil fuels, have extended durability and reuse potential, and contain no toxins or less toxic chemicals.

Environmental Committee – As part of the MTM Luxury Lodging collection, Alderbrook Resort & Spa is represented by an Environmental Committee to further educate and inspire fellow associates on all aspects of the Environmental Stewardship program. This ensures the highest participation is being achieved as well as working toward changing existing mindsets about this important initiative that directly impacts business.

Culture of Recycling – Alderbrook Resort & Spa is committed to further enhancing a culture of recycling paper, cardboard, bottles and glass in all areas of the property – offices, function space, and food and beverage outlets.

Voluntary Towel/Linen Service – Alderbrook Resort & Spa offers a voluntary towel/linen service. Linens are changed every third day unless requested to be changed sooner. Towels that are hung on racks are not replaced, unless specifically requested.

Education and Awareness – Alderbrook Resort & Spa is committed to educating guests and associates on the importance of environmental stewardship and LEED initiatives with communication through the website.

Sales Collateral – Alderbrook Resort & Spa has created an electronic proposal, an enhanced website and video to minimize the need for paper collateral.

In-room Amenities – Alderbrook Resort & Spa offers in-room Molton Brown bath amenities in bulk dispensers to reduce excessive waste of sample size bottles.

Renovation (2002) – During the renovation Alderbrook Resort & Spa recycled numerous timber strands to the new property. The stream that runs through the property for the Salmon habitat was also revitalized with resting pools that run through out the property.

Water Treatment Plant – Alderbrook Resort & Spa also boast its own waste-water removal plant that pumps much needed oxygenated water back into the depleted Hood Canal.
